

LEVEL THE ODDS WITH EXAMREADER

Specifically designed for use in tests and exams when a student requires reading assistance.

ExamReader is a convenient portable off-line assistive text reader for printed text. Everything, including the natural speaking voices, is embedded in this off-line device and there is no need for computer or internet connections. This means students who have reading difficulties such as dyslexia can independently take exams knowing that they can read and understand the questions.

By using ExamReader, schools don't have to invest in human readers or extra rooms, saving money to spend on other supporting resources instead. ExamReader is approved for use in exams by various exam boards, like The Joint Council for Qualifications (JCQ) in UK. Check with your special educational needs coordinator about availability in your school.

ExamReader features

- Supports 10+ languages.
- Reads text out aloud in English, Spanish and French.
- An off-line closed system with no opportunity to store any assistive content.
- Speaker and earphone jack.
- Rechargeable battery sufficient for a full day use.
- Cost efficient assistive solution for schools.

Scanning pens are essentially digital highlighter or mark-up pens. But takes you one step further. A scanning pen digitizes the printed information and allows it to be processed further which makes it possible to use for multiple purposes. The ones important to us are productivity and learning.
