

BREAK THE LANGUAGE BARRIER WITH LINGOPEN

Specially designed for students learning a new language and students with English as an Additional Language (EAL).

Scan the text to look up and translate words between different languages in an instant. LingoPen also has a text to speech function for further language retention. It features a voice recorder and supports storing scanned text. Everything is built-in, and there is no need or requirement for an internet connection.

The digital highlighter – alongside the text-to-speech function – supports multi-sensory learning and aid language retention. You can use the included voice recorder to support learner revisions, and students can record pronunciations or objectives from teachers to develop independent learning.

LingoPen features

- Translates to/from English and German/French/Italian/Spanish/Russian/Chinese and one-way English to Arabic.
- More than 10 built-in translation dictionaries.
- Reads text aloud in English, French, German, Italian, Russian, Spanish and Chinese.
- Scans and stores text internally (2GB) as well as scans to a computer (no software required).
- A voice recorder for memos and to develop vocabulary and pronunciation.
- Speaker and earphone jack.

Scanning pens are essentially digital highlighter or mark-up pens. But takes you one step further. A scanning pen digitizes the printed information and allows it to be processed further which makes it possible to use for multiple purposes. The ones important to us are productivity and learning.
